

RVs and Boats Stay Connected Using Axesstel's MV440 Wi-Fi Broadband Gateway

Challenge

For travelers in their RVs and campers or house boats and yachts, finding a way to stay connected to the internet while on the go is difficult and costly. When enjoying leisure time in their "home away from home", travelers want to be online for the advantages it offers: instant access to information about services, entertainment & events, nearby sites of interest, maps & directions, news, weather, plus email and much more. The problem is how to get fast, reliable and affordable internet access while being mobile, in remote locations or near shore.

Solution

The reliability of both the Verizon Wireless 3G data network and Axesstel's MV440 Wi-Fi Broadband Gateway enables travelers to have internet access anywhere on the vast Verizon Wireless national mobile broadband network. The Gateway can be easily purchased through Verizon Direct Sales or Axesstel's Indirect Sales or Partners and activated on the Verizon network.

The Gateway's four-port Ethernet switch provides a plug-and-play solution for networking multiple laptops and desktops. An integrated 802.11b/g Wi-Fi router enables wireless broadband data access in remote and shore locations, as well as trouble-free set up of a local hotspot. Dual-band functionality (800/1900MHz) provides compatibility with networks worldwide. Battery back-up provides wire-free access from virtually any environment and ensures operation anywhere at any time.

Benefits

Verizon Wireless is well known for its expansive coverage and the MV440 Wi-Fi Gateway enables fast and reliable Internet access. This combination provides an economical and budget-friendly solution for the motorhome/RV and boat/maritime industry to cost-effectively have internet access while on the go.

MV440

CDMA 1xEV-DO Rev. A Wi-Fi Gateway

- Receiver Diversity Antennas for superior quality data service
